

Genelite GATSI40160

Genelite GATSI40160 Automatic Transfer Switch

160 A

RATING

AUTOMATIC

TRANSFER SWITCH

Up to 111 kVA

SUITS GENERATORS

THREE PHASE

OVERVIEW

The Genelite GATSI40160 is a 160A, three phase automatic transfer switch with motorised changeover, for auto-start three phase generators up to 111kVA. An automatic transfer switch joins the mains, a generator and a site's switchboard: when the mains fails it signals the generator to start and moves the load across, then transfers back once the mains returns.

TECHNICAL OVERVIEW

Rating	160A, three phase, motorised changeover
Suits	Auto-start three phase generators up to 111kVA
Enclosure	IP55 rated steel
Warranty	2 years

CONTROLS

Controller	ATS-I with graphical display and alarms
------------	--

DIMENSIONS & WEIGHT

Dimensions (L x W x H)	75 x 50 x 25 cm
------------------------	------------------------

STANDARD FEATURES

- A 160A three phase rating with motorised changeover: a motor drives the switching between mains and generator, so the transfer needs no one at the switchboard.
- It is sized for auto-start three phase generators up to 111kVA, which makes it straightforward to match to the generator.
- The ATS-I controller has a graphical display and alarms, so you can see what the switch is doing and be alerted when something needs attention.
- The steel enclosure is IP55 rated, meaning it is protected against dust ingress and against water jets from any direction.
- The switch carries a 2 year warranty.

BUYING FROM GEN4SALE

- Delivery Australia-wide: check the price to your postcode on the listing
- Installation by a licensed electrician required
- Talk to us before you buy and we will check it suits your generator

Not sure this switch suits your generator?
